

The MAXBIT

DIGS THE PERFECT HOLE EVERY TIME.
DIG IT. PLANT IT. DONE.

Maximize gardening productivity with **MAXBIT**, the newest digging technology that simply attaches to a power drill, saving time while avoiding the aches and pains that follow weekends of gardening and landscaping. The **MAXBIT's** patented angled design **dig the perfect hole every time**.

Notice the angles of the bit compress dirt into the bottom and sides of the hole, resulting in a perfectly round, flat-bottomed hole each time. This compressing action eliminates the pile of dug out dirt for you to deal with when you're done. The bit and its extension piece fit on most common power drills, and are made in North America with ultra-tough steel that's powder coated to resist rust.

The **MAXBIT** works in tilled, or untilled soil, and makes perfect 4" bulb holes, as well 6" potted plant holes. With the power of a drill doing the digging, planting a garden is easier and faster, than ever before.

Dig smart, not hard.

Shipper Display included when fully stocked as shown.
