

What is EZ Set?

- EZ Set is a trass-based, fibre-reinforced binder that creates a highly permeable, freeze-thaw resistant bedding layer when mixed with 3/8" angular clear aggregate.
- EZ Set offers superior durability and strength, and helps minimize efflorescence migration, making it ideal for large-format pavers, slabs, natural stone, porcelain, and tile on an open graded base.
- EZ Set can also be used as a durable bedding layer over a conventional base.
- EZ Set is a cutting-edge solution combining our premium products EZ Set, EZ Bond, EASYJoint or Evolution Pro+ or PolySweep polymeric sands – to deliver unmatched strength and durability for large-format hardscapes.
- Engineered for long-lasting resilience, this system enhances the longevity of modern outdoor spaces, making it perfect for both residential and light-duty commercial applications.

KEY BENEFITS: Why use EZ Set?

- High performance trass-blend fibre reinforced = rigid structural setting bed
- Ideal for porcelain wet lay
- NO HOLLOW SOUND
- Perfect for large format pavers / slabs
- Permeable – maintains drainage
- Increases strength
- Reduces freeze/thaw damage
- Helps minimize efflorescence
- Easy to install
- Consistent results

FEATURES	BENEFITS
Trass-Blend Fibre Reinforced	• Creates a Rigid Structural Setting Bed
Promotes Internal System Drainage	• Reduces Freeze/Thaw Damage • Helps Minimize Efflorescence
Easy To Install	• Mixes Onsite with 3/8" Angular, Clear Stone
